

# SecuriX Enterprise

Secure AI Governance for Your Organization

## WHY SECURIX?

SecuriX allows your organization to embrace AI productivity without compromising on security or budget. We provide the governance layer that ensures your team uses AI safely, within budget, and in compliance with corporate data policies.

### Data Security & Compliance

- **PII Shield:** Automatically redacts sensitive information like customer names, emails, and ID numbers before it reaches AI models.
- **Proactive Governance:** Enforce corporate security policies instantly to prevent data leaks.
- **Audit Ready:** Maintain a clear trail of all AI interactions for internal and external compliance audits.

### Budget & Cost Control

- **Cost Predictability:** Move away from expensive per-user seat licenses to a transparent consumption-based model.
- **Usage Limits:** Set hard budget caps at the department or team level to prevent runaway AI spending.
- **Centralized View:** One dashboard to track exactly how AI budget is being utilized across your organization.

### Operational Governance

- **Seamless Adoption:** Employees use a familiar, intuitive chat experience that looks and feels like consumer AI.
- **Managed Access:** Single Sign-On (SSO) integration ensures only verified employees have access to company AI tools.
- **Standardized Access:** Whitelist only the AI models that meet your company's security standards.

## DEPLOYMENT

SecuriX integrates directly into your existing enterprise environment. We handle the complex security and cost enforcement in the background, so your employees can focus on their work, and your IT leadership can focus on the bottom line.
